

EXAM RESULT PORTAL

Problem Statement:

The current result system within our educational institution is characterized by inefficiencies from manual data entry, calculations, processes in traditional Excel sheets. This manual method causes delays and mistakes in processing and analysing results. To solve these problems and make the results management process smoother, we need to create a user-friendly College Results Management System.

Abstract:

The proposed project aims to develop a user-friendly College Results Management System. This system seeks to automate and streamline result-related tasks, replacing manual methods with a digital solution. The implementation of this system is expected to improve efficiency, accuracy, and accessibility in managing and analysing student results within the educational institution.

In the Software we can register as a user and user has of three types, student, faculty and administrator. Administrator has the power to add new user and can edit and delete a user. Faculty has rights to analyse the results of students. A student can register as user and can see their results.
